RFID software

AX'Ware, the easy to use software for testing and using the UHF RFID functionalities of AXEM Technology's mobile terminals.

The application is available in two versions :

- **Trial version:** free with a 30-day trial period
- **Pro Version:** one fee-based license per device

AX'ware is designed for inventory and tracking applications for industrial sectors: logistics, laundry, construction, railways...

The software is compatible with the following mobile terminals:

- MBA5-P23 V8
- ATX-800 V9

AX'ware, RFID made easy

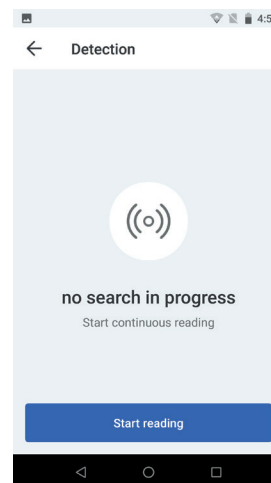

Detection

Identify UHF tags in the reader's environment

- Creation of a reference inventory based on the detected tags
- Data recording
- Fast export

Inventory

Compare a list of tags to be detected with a pre-recorded reference list

- Identification of the number of tags inventoried / total number of tags in the reference list
- Success rate
- Possibility to geolocate a tag among the list
- Exporting an inventory report

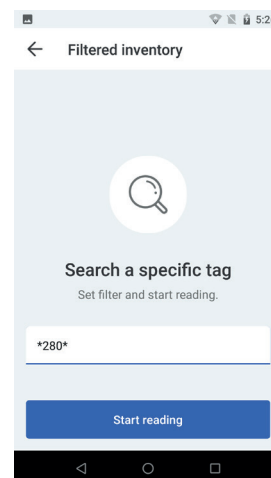

Filtered inventory

Perform an inventory based on predefined criteria

- Identification of the tags including the filter
- Possibility to geolocate a tag among the list
- Export of a filtered inventory report

V1.1

Non contractual document

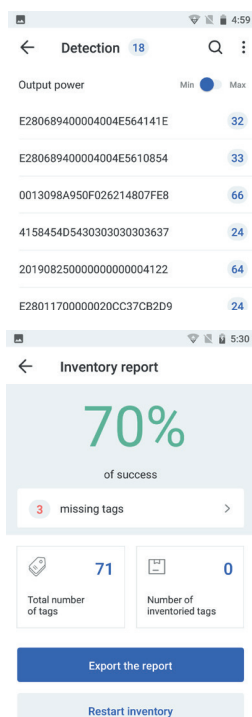

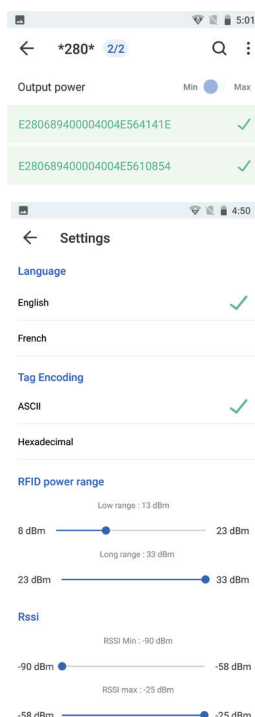

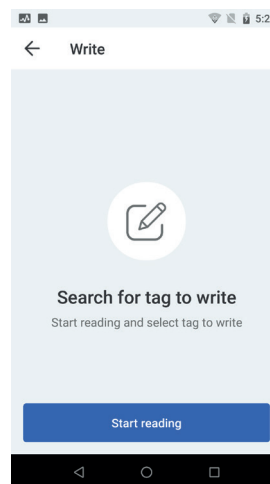

Writing

Write and modify the EPC code of the UHF tag

- Tag detection
- Encoding of a single tag or a series of tags with incrementation

Benefits

Easily configure the application for your tracking needs!

- tag search function
- Encoding of the tag in ASCII or Hexadecimal
- UHF Min and Max power adjustment from 8dBm to 33dBm
- Quick and easy export function of detection lists and inventory reports
- Storage of data in .csv format in the internal storage of the device
- Exploitation of all data: detection list, inventory reports, filtered inventory
