Procedure

Procedure for Installing Protect + on AX'Label
Time < 1min

Required material

In order to install the label with the Protect +, it is recommended to use the following material:

- Degreasing agent (e.g. isopropyl alcohol)
- Paper towel or rag
- A spatula
- A heat gun (optional)

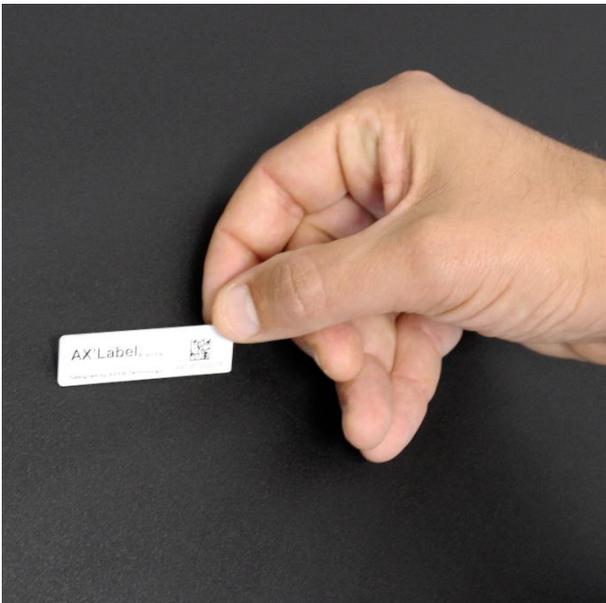

Procedure

Clean the surface

Degrease and clean the surface. The label will not stick properly to the surface if it is dirty, greasy or wet.

Attach the label to the clean and dry surface

Cover the label with Protect +

The label shall be centered in respect to the Protect +.

Press on the label to remove air bubbles.

Use the spatula to apply the Protect + against the metal and remove the air.

Its' ready!

Fixing will be fully effective after 24 hours.

Optional:

For extreme adhesion, use the heat gun at 90°C and run slowly around the protective surface for a few seconds.
